

1000ml Soap Dispenser System

Modular, Scalable, and Built to Last

About this product

The 1000ml Soap Dispenser System is designed to meet the demands of modern facilities with a modular platform that combines flexibility, durability, and cost control. Its sleek outer body houses interchangeable components — including pumps, refillable bottles, and rubber stoppers — that can be replaced as needed to extend the unit's lifespan and reduce maintenance costs.

With the ability to swap between foam and lotion pumps, the system adapts to multiple hand care formats without the need for separate dispensers. The refillable 1000ml bottle is also independently replaceable, supporting hygiene protocols in healthcare, foodservice, and other environments where frequent sanitization is required.

Durable construction, streamlined upkeep, and a professional design make this system an ideal choice for high-traffic, hygiene-critical facilities.

- **1000ml Capacity:** Designed for high-volume use in busy environments.
- **Modular Pump System:** Quickly convert between foam and lotion formats by replacing the pump.
- **Replaceable Refillable Bottle:** Replace only the internal bottle if worn or contaminated, reducing waste and supporting compliance.
- **Refillable & Cost-Effective:** Each unit includes a 1000ml refillable bottle, lowering supply costs and minimizing packaging waste.
- **Durable ABS Construction:** Impact-resistant body maintains a clean, professional look under heavy use.
- **Tool-Free Maintenance:** Replace wear parts such as the pump and stopper quarterly to keep the dispenser performing at its best.
- **Colour Options:** Available in white or black to complement any washroom setting.
